

## Major Characteristics:

### Create tasks and milestones:

Aside from the start date and duration, every task may have priority, cost, color and fill pattern, text notes and user-defined custom fields.

### Organize tasks in a work breakdown structure:

Hierarchical tree where progress, dates or costs of lower level tasks is summarized on the higher levels. Summary tasks can be collapsed to hide tasks which are not important at the moment.

### Draw dependency constraints between tasks:

Like "start X when Y finishes" and the application will take care of enforcing these constraints. You can add a lag or use other types of constraints.

## Glossary:

Name	Description		
Task	In project management, a task is an activity that needs to be accomplished within a defined period of time or by a deadline to work towards work-related goals		
Gantt Chart	a chart in which a series of horizontal lines shows the amount of work done or production completed in certain periods of time in relation to the amount planned for those periods.		
Resources	In project management, resources are required to carry out the project tasks. We only require human resources for the company at this time.		
Priority	Project prioritization gives you and your team an easy-to-follow plan for the work that needs to be done		
Milestone	Milestones are a way to indicate the beginning and the end of major phases in the project.		
Scheduling	Scheduling in project management is the listing of activities, deliverables, and milestones within a project.		
Duration	Progress	Predecessors	Explicitly
